

PROCESS & WASTEWATER TREATMENT SOLUTIONS

We provide scalable and modular process and wastewater systems, along with innovative lifecycle services at the lowest Total Cost of Ownership.

We Provide:

MBR Solutions

Specialty Engineering

Jet Aeration & Mixing Systems

Emergency Wastewater

Automation & Controls

Design & Installation

[INTEGRATEDWATERSERVICES.COM](https://www.integratedwaterservices.com)

THE PERMANENT MODULAR ADVANTAGE

Stop choosing between speed and durability. NXT | MBR is a high-performance water reclamation system that delivers the rapid commissioning of a modular solution with the 50-plus-year design life of a site-built facility. By merging the elite structural engineering of Crom with IWS's wastewater science, we've created a "perfect fit" infrastructure asset that grows with your needs.

Why Choose NXT | MBR?

- **Superior Effluent Quality:** Advanced MBR technology delivers ultra-clean water in a fraction of the footprint of traditional plants.
- **Waste-to-Revenue Asset:** Transforms wastewater into high-value reclaimed water, creating a "purple-pipe" revenue stream for irrigation or industrial use.
- **Operational Offset:** Move beyond simple disposal by converting costly effluent into a refined, reusable supply that powers your circular economy.
- **Industrial-Grade Permanency:** ACI-350 compliant shotcrete structures built for extreme durability and long-term corrosion resistance.
- **Turnkey Integration:** A fully pre-engineered, vertically integrated system that eliminates the complexity of multi-party site builds.
- **Scalable Modular Growth:** Seamlessly expand capacity in 250K GPD increments to match project growth and manage capital deployment.
